

#### Instructions to authors:

The Journal publishes papers from the following areas of immunology:

Clinical Immunology and Allergology	Leucocyte Physiology
Immunochemistry and Complement	Viral and Bacterial Immunology
Tumor Immunology	Cell-mediated Immunity
Immunopathology	Immunogenetics and Transplantation

Manuscripts in English are preferred, but papers in German may also be considered for publication. The only criterion for publication will be scientific quality.

The Journal considers for publication primarily *original papers* and *brief communications*. On occasion, the Journal will publish *reviews*, *editorials*, and *letters to the editor*. Reviews should be solicited by the editors. Editorials are primarily contributed by the editors but may also be accepted from authors not associated with the Journal. Letters to the editor should deal with matters of urgent scientific interest and should be very brief. All manuscripts should be submitted in triplicate including the original typescript to:

DIETHARD GEMSA, M.D.  
Department of Immunology, Medical Centre for Hygiene  
Robert-Koch-Straße 17  
D-3550 Marburg, Fed. Rep. Germany

*Manuscripts* should be no longer than 20 typewritten pages (double-spaced) for original papers and 5 typewritten pages for brief communications. Manuscripts should be divided into the following sections: Abstract, introduction, materials and methods, results, discussion, and bibliography. Brief communications may integrate some of these sections as appropriate but must have a separate summary. The *title page* must comprise the title, a short title to be used as running head (not exceeding 50 characters), the name(s) of the author(s), the laboratory or institution at which the paper has been prepared, an address to which correspondence should be directed, as well as a list of abbreviations used in the paper. *References* should be cited in the text by numbers in brackets and listed in the order cited in the text. The following are examples of how references should be listed:

1. SJOBERG, O., J. ANDERSSON, and G. MOLLER. 1972. Reconstitution of the antibody response in vitro of T-cell-deprived spleen cells by supernatants from spleen cell cultures. *Immunol.* 109: 1379.
2. KABAT, E. A., and M. M. MAYER. 1961. *Experimental Immunochemistry*, 2nd ed., Charles C. Thomas Publ., Springfield, Ill. 133 pp.

The author is fully responsible for the accuracy of bibliographic references.

*Illustrations* may be submitted as line drawings or glossy prints (9 × 12 cm). Each figure should be accompanied by a legend that contains sufficient detail to be understood without reference to the text. Prints are to be marked by «Instant Lettering». Composite illustrations are to be mounted on cardboard. Color photographs are only accepted in special cases, and the author will be charged 50% of the additional expenses (approx. 600.- to 800.- DM per plate).

*Tables* should each be typed on a separate page and should contain sufficient information to be understood without reference to the text. Footnotes to table should be numbered and placed on the same page.

*Proofs and reprints* will be sent to the author named for correspondence. Only page proofs are sent to the authors. For each paper, 75 reprints will be provided free of charge. Additional reprints will be charged for and must be ordered at the time the corrected proofs are returned to the publisher.

All corrected proofs shall be sent by the authors to the following address:

DIETHARD GEMSA, M.D.  
Department of Immunology, Medical Centre for Hygiene

# Atlas of Blood Cells

Function and Pathology  
In 2 volumes

Edited by **D. Zucker-Franklin**, New York University, New York, **M.F. Greaves**, Leukaemia Research Fund Centre, Institute for Cancer Research, London, **C.E. Grossi**, University of Alabama, Birmingham and **A.M. Marmont**, Divisione di Ematologia, Ospedale S. Martino, Genova

2nd revised edition 1988. XXX, 777 pp., 789 col. and 643 b/w fig., cloth DM 398,-

(Exclusive distribution rights for Continental-Europe except GB and Italy).

Gustav Fischer in Cooperation with edi-ermes, Milano

## Contents 1st volume:

**In vitro and in vivo hematopoiesis** · Cellular identification and markers · **Erythrocytes** · General aspects of erythropoiesis · Abnormalities of red cell production · Abnormalities of red cell destruction · **Neutrophils** · Normal structure and physiology · Neutrophil pathology · Appendix: Immunophenotypes in myeloplastic and »mixed-lineage« acute leukemias · **Eosinophils** · **Basophils** · The mononuclear phagocyte system monocytes and macrophages · Dendritic cells

## Contents 2nd volume:

**Lymphocytes** · Normal lymphocytes · Lymphoproliferative disorders · Lymph nodes, reactive and neoplastic conditions · Acquired immunodeficiency syndrome · **Megakaryocytes and platelets** · **Nonrandom chromosome changes in hematologic diseases** · Aplastic anemia and hematopoiesis after marrow transplantation

The present "Atlas of Blood cells" does not simply show common and rare forms of hematopoietic cells, but rather attempts to illustrate function and pathology in terms of recent biochemical and genetic concepts. It follows that this kind of "molecular morphology" must reflect the remarkable methodological and technical advances of the past years. Thus, preparing the 2nd edition, it became necessary to revise almost every chapter and to replace and add to its list of references. More than 50% of the figures are new.

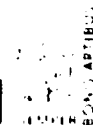

This Atlas will be published in German in September:

Zucker-Franklin et al. · **Atlas der Blutzellen**

Funktion und Pathologie · In 2 Bänden

1990. Etwa 800 S., über 1400 Abb., Ln., kpltt. etwa DM 480,-
